ELECTRICAL DIAGNOSTIC WORKSHEET

Prepared 11/09/2026

Date _____ Customer _____ Phone _____

Vehicle _____ VIN _____ Mileage _____

RO # _____ Technician _____

CIRCUIT / SYSTEM UNDER TEST

BASELINE - BATTERY & CHARGING

Battery voltage (resting) _____ Charging voltage _____ Battery test result _____

Parasitic draw (mA) _____ Spec / limit _____

CHECKS - POWER, GROUND & VOLTAGE DROP

Voltage drop: measure across the loaded circuit. Over 0.2 V on a power or ground leg is a fault.

Check point	Expected	Reading	Drop + (V)	Drop - (V)	Result

VERIFICATION

- ☐ Power present at the component (loaded, not just key-on)
- ☐ Ground verified under load - voltage drop, not just continuity
- ☐ Connector pins - tension, corrosion, pushed-out terminals
- ☐ Wiggle test performed - fault changes with harness movement
- ☐ Known-good signal / swap test done where possible

FINDINGS & REPAIR

Tech signature _____ Date _____
